No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1, 7

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:

APPLICANT: Clapper, Jonathan D.

APPLICANT: Stolk, John A.

TITLE OF INVENTION: COMPOUNDS FOR IMMUNOTHERAPY AND

TITLE OF INVENTION: DIAGNOSIS OF COLON CANCER AND METHODS FOR THEIR USE

FILE REFERENCE: 210121.471C12

CURRENT APPLICATION NUMBER: US/09/833.263

CURRENT FILING DATE: 2001.04-10

NUMBER OF SEQ ID NOS: 1093

CURRENT FILING DATE: 2001.04-10

SEQ ID NO 1073

LENGTH: 474

TYPE: DNA

TYPE: DNA

GRANISM: Homo sapiens

Sequence 113, Application US/10157031

Sequence 113, Application No. US20030108890A1

Sequence 113, Application No. US20030108890A1

GENERAL INFORMATION:

APPLICANT: Baranova, A. V.

APPLICANT: Kozlov, A. V.

APPLICANT: Lobashev, A. V.

APPLICANT: Lobashev, A. V.

APPLICANT: Lobashev, A. V.

APPLICANT: Krukovakaya, L. L.

TILE OF INVENTION: In silico screening for phenotype-associated expressed sequences
FILE REFERENCE: 2760-103

CURRENT APPLICATION NUMBER: US/10/157,031

CURRENT FILING DATE: 2002-05-30

NUMBER OF SEQ ID NOS: 415

SOFTWARE: PatentIn version 3.1
